ICOLDhasintroducedthepotentialriskofdamassociatedwithcapacity,height Case studies 9. Its purpose is to identify the main real risks associated with each type and height of dam for all circumstances and can be conducted: i in extensive risk analysis of very large dams, to substantiate reliably the probabilities chosen in fault trees using Monte Carlo simulation technique; ii in simplified risk analysis of smaller dams, to focus low-cost risk analysis on a few main risks; iii and in identifying possibilities for reducing these risks through low-cost structural or non-structural measures Lempire, Geochemistry, Groundwater and Pollution C.
