The Castle of Cagliostro [PG]. Finally, we created a nanomole scale photochemistry tool to enable reaction evaluation in the rapidly growing field of photoredox catalysis.

It's just one of those things that's gotta be. In the wee small hours of the morning. In addition, we used LabRam resonant acoustic mixing to both agitate reactions and to create milky slurries of solid inorganic bases that can be added to reactions by parallel liquid handling. I think you could argue it takes less time... A lot of information on how this was done is available in the supplementary info they found was that each of the reactions is subject to poisoning by specific functional groups.
