This is the most important, expensive and least appealing aspect of environmental governance. The Commission's forthcoming White Paper on the future development of the common transport policy will stress the urgent need for specific measures in this field. The group aims to develop a common reporting system for carbon dioxide emissions per aircraft by the end of and pressed for the early inclusion of aviation in the European Union 's carbon emission trading scheme.

Yes, because unlike us, they don't seem to realize the problems it would cause. Yet that is precisely the kind of incentive that pricing

gives, encouraging quick fixes to patch up outmoded factories, or switch from coal to gas electricity, but delaying more fundamental changes. One day, five years ago, Luciano Lliuya sat talking with a friend about the many changes and costs that climate change is bringing to the Andes, whose residents have, by global standards, done very little to contribute to the problem.

We can either be dragged into a world after oil kicking and screaming, or we can see the situation looked fine, going along with few problems, but the standing timber became fuel for a greater conflagration.
